

List of the birds of French Guiana

Brought up-to date January 2008

The list of the birds of French Guiana presents all the species seen in French Guiana . Its aim is to give an account of the presence or absence of some species.

It will be brought up-to-date annually as knowledge and field observations progress.

This will be done by the ' Comité d'homologation de Guyane '(CHG) which also works on all the birds in French Guiana. The list to date comprises 684 species

Sequence of species

The list of the birds of French Guiana follows the sequence of the South American Classification Committee (Remsen et al, version 24, January 2008).

French names

The French names of birds follow the choice of the CINFO (Commission internationale des noms français des oiseaux)

New species for French Guiana

Since November 2005, new species for French Guiana must be submitted on a well-documented descriptive sheet if possible together with photographs, voice recordings, sketches ...); those data must be accepted unanimously by the Comité d'homologation de Guyane, to be formally included in the list . The list of those species requiring homologation, the follow-through and the results of pending homologations, as well as a model of record sheet are available on the website of the CHG: <http://perso.orange.fr/gepog/CHG/> .

Categories in the list of the birds of French Guiana

These categories are largely inspired by the list of birds in France (LPO) and adapted to the Guianan ornithological context.

Category A: those species present in the wild in French Guiana including the coastal region, and whose origin in the wild do not admit of a doubt, at least for one individual.

Category B: Those species present in the wild in French Guiana, but which have not been seen since 1992 when 'Oiseaux de Guyane' (Tostain et al. 1992), establishing a complete inventory of the state of ornithological knowledge at the time was published.

Category C: species introduced or escaped from captivity in French Guiana for several years, which have bred and maintain themselves in a natural environment without further human intervention. Species introduced or escaped from captivity outside French Guiana, answering the same criteria, and observed here in the course of spontaneous movements are included in this category.

Only the species in categories A,B, and C are included in the list of the birds of French Guiana.

To complement this list, there are also:

Category D: species whose natural origin is possible but not certain. According to records they may have been deliberately introduced in French Guiana or have escaped from captivity.

Category E: species which have been published as part of the region's avifauna, but now withdrawn from the list. We keep a record of those species in this category.

Acknowledgments

The establishment of this list has been made possible thanks to the collaboration of ornithologists, naturalists and the web-community of the discussion forum Ornithoguyane, who report and illustrate their discoveries through articles, record sheets, mails....

We wish to thank Norman David for attentively rereading our list and for his judicious advice.

Thanks also to Olivier Claessens and Johan Ingels who have been particularly involved in the elaboration of this list, an with whom we have had fruitful work sessions, and exciting discussions on the status of birds in French Guiana.

The GEPOG has allowed us to consult its data base to complete and check many important data. let them be warmly thanked here.

List of the birds of French Guiana

Those species whose category is followed by * are subject to homologation in French Guiana.
